

# Seclusion and Bookmarking

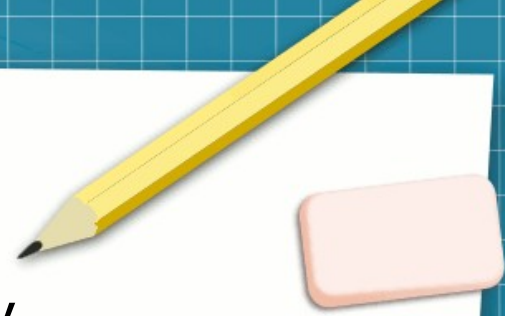

Best Practices

# Bodger1234

- I am the leader of Seclusion, it is my responsibility
- My mains are Bodger1234, CletusSlackjaw Yokel and tiger Enaka
- My alts all have the first name of Bodger or Cletus

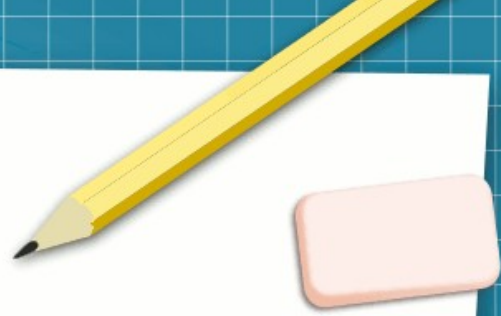

# Bookmarking is for practical reasons

- We maintain Seclusion as a mostly secure zone, where Lumen folk can feel safe, do PI, Indy or other in relative safety
- As a result our primary focus is to “roll” roaming wormholes
- If you do not know
  - “Rolling” means to force the collapse of a wormhole
  - “Roaming” wormhole is a wormhole that randomly appears.

# Seclusion

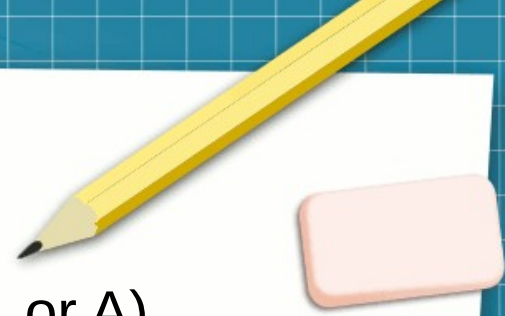

- Seclusion has 2 static wormholes
  - Static means, if you “Roll” that wormhole, another of the same class of wormhole will appear in a few seconds
- We name the 2 statics, Nexus and Ursus

# Nexus

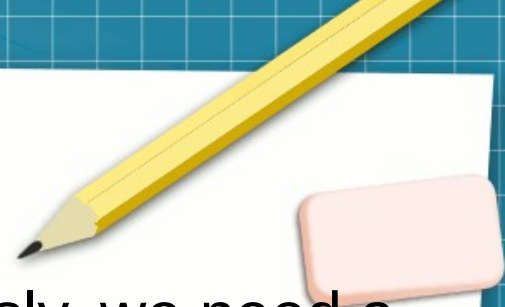

- Nexus, is a static connection to High Security Space
- Our normal SOP is to “rotate” that static until it is in Amarr space, between 4-12 jumps from the Amarr Trade Hub
  - “Rotate” means we will continue to roll the wormhole until it is aligned to Amarr space.
- This allows all Lumen folk who are mostly in Amarr space to access Seclusion with relative ease.
- FYI, the wormhole type of Nexus is B247

# Ursus

- Ursus is a static that always connects to a C1 (Class 1 or A) wormhole.
- The C1 has much to harvest, gas, data/relic sites, ore and other things as well.
- Ursus is always a medium sized hole, you can bring over battlecruisers and below, nothing bigger.
- Periodically we will “rotate” Ursus, so that it is aligned to Caldari space, so Lumen folks can carry their goods to market in Jita.
- BTW, the wormhole type of Ursus is Z647

# Bookmarking Standards

- Because we take the security of Seclusion seriously, we need a consistent manner to bookmark, so that the hole can be quickly evaluated for safety and security.
- I am going to walk through one of my morning evaluations which includes scanning and bookmarking.

Directional Scanner Probe Scanner

Scan Results 0 Filtered

Distance	ID	Name	Group	Signal
16.54 AU	IL0-338	Cosmic Signat		0.0%
5.69 AU	KMI-964	Cosmic Signat		0.0%
5.76 AU	TKT-860	Average Front	Ore Site	→→→
9.53 AU	TSZ-639	Cosmic Signat		0.0%
6.16 AU	UDG-910	Cosmic Signat		0.0%
7.69 AU	WZ0-472	Cosmic Signat		0.0%

X 8

4 AU

Analyze

- This is what the probe scanner presented me this morning.
- 5 unscanned cosmic signatures
- 1 ore site.
- I now need to figure out if anyone else has done any scanning and then scan the rest.

- The Seclusion Bookmark folder, which is given to people who we have vetted.
- Let's talk about things here.
- The primary sub folders I want to mention are:
  - Mining Tacticals
  - Nexus
  - Data/Relic Sites
  - Gas Sites
  - Wormholes Roaming
  - Wormholes Not Zero
  - Ursus
  - And top folder items

- The first item I want to mention is an error that I see, that I will correct. Because of that error, is the purpose of this presentation.
- Note in Wormholes Roaming there is a bm for KMI-964. Unfortunately it has no information to work from, nor is the bm at zero.
- I will show you the proper format of a bookmark in a later slide. The only useful information here is the SIG\_ID which is KMI-964, that is good. ALL BOOKMARKS have to have the SIG\_ID as the first element of it. This allows a quick evaluation of the security of the hole.
- I will delete this bookmark in a later slide and properly bookmark it.

- The next thing I will point out, is that Ursus has collapsed on it's own. Wormholes have an expected life and this one collapsed on it's own because of a timer.
- The reason I know it has collapsed, is if you look in the Ursus folder, the bookmarks in "blue" mean that they are in the current system. The 2 in our system are BLZ-763. And if you look at the probe scanner, in one of the previous slides you will see that that cosmic signature is not present, hence Ursus has collapsed.
- I will clear out that folder once I have identified the new Ursus. We always clear out that folder once it collapses.
- The Ursus folder is to bookmark any cosmic signature in Ursus for easy access.

## Mining Tacticals

- I am a miner, so this is important to me.
- See the bms labeled TKT-860
- This is that ore site you saw in the probe scanner.
- Note I marked the location of the big Gneiss rock (average ore sites have 2 million cubic meters of Gneiss)
- Always warp to 20km of those specific rocks.
- Also there is the "Jump Off" point, you warp here and all rocks are on grid and can be warped to, simplifying solo mining ops.

## • Nexus

- The Nexus folder is very important.
- First you see the bm WZD-472 Nexus Exit. This lets me know that the SIG\_ID of Nexus is. Allowing me to evaluate on a quick glance as to whether Nexus has collapsed on it's own (or by force).
- \_Nexus Cloaked and Uncloaked tacticals. If an enemy comes through the hole and establishes a bubble either via HIC or Interdictor probes, if you warp to 100km to "watch" the hole you will be caught in the bubble and likely be destroyed.
- The Cloaked and Uncloaked bms, are always 2,100+ km from the hole. Close enough to watch it, and far enough away to avoid being caught in the bubbles.

## Nexus Continued

- Notice at the top level (that is not in the Nexus folder) you will see 2 other bms
- Nexus Exit, this bookmark is at zero and you can exit the hole to HS.
- Nexus Entrance, is the other side of the hole, so if you want to come to Seclusion/Nexus you set your destination to this bm and make your way here.

- Data/Relic Sites
- In Seclusion all resources are to be harvested on a first come first serve basis.
- This stores the location of Data or Relic sites.
- Note it should not include Sleeper sites or Ghost sites.
- Sleeper sites have rats that have to be killed prior to analyzing the cans. These rats are tough btw, so be careful.
- Sleeper sites should be bookmarked into the folder called Combat/Sleeper sites.
- Ghost sites are unique and rare, I cannot remember the names of these, please look them up. But when you analyze the first can if you do not finish and get off grid very quickly you will be destroyed. BM them into the Combat sites folder.

- Ursus
- Here in this folder should be the BM at zero of the entrance to Ursus. In this case (even though it is collapsed) the bm is BLZ-763 Ursus.
- Note: sometimes we add the words Void or Silence to the bm.
- Void means we never visited the hole and is NOT at zero.
- Further, Void is awesome, because once it appears on our side (as Z647) it does not appear on the other side for about 8 hours. And then the other side will see the K162. It is a layer of protection.
- Silence means we visited it, it is at zero. But we never entered Ursus.
- Note there are 2 bms, one void which was the first scan of it. Then there is the 2<sup>nd</sup> one which is at zero and is used to enter.

Analyze

- Here I scanned ILO-338 and found it was a data site.
- I added it to the Data/Relic folders by save location. Note no special adornment, but it needs the SIG\_ID.

Launch

- Here I have fully scanned the cosmic signatures.
- I found 2 wormholes, and 2 data/relic sites.
- 1 of the wormholes was already scanned, but I scanned it here as well for demonstration purposes.
- The 2 wormholes are Nexus and Ursus. I did not have any roaming wormholes this morning so I will use them as examples on how to bookmark roamings.
- When I scan them I usually first put the wormholes in the Roaming Not Zero folder until I can evaluate them. Here is an example where I put what will turn out to be Nexus in the not zero folder.
- Note: I did not format the bm, only the SIG\_ID is important.

1.E Wormholes Not Zero (while scanning) (Bodger1234) [1]

1.0 Wormholes Roaming (Lorens Ghassan) [1]

WZD-472 HS Larger B274 Coordinate 0 J122931

Here I am going to bookmark Nexus as if it were a roaming.

- I first warped to 100km of the bookmark in Roamings Not Zero
- Then I did a show info. Which is the first image.
- The 2<sup>nd</sup> image is the overview
- And the 3<sup>rd</sup> image is how it would be bookmarked.
- All the information we need to bookmark it is in those 2 screens.
- First in the Show Info, we see “This wormhole seems to lead to high security space”.
- The last line says “Larger Ships”
- The overview says the type is B274.
- So the proper format of the bm is:
- “WZD-473 HS Larger B274”

**Wormhole: Information**

Wormhole B274

**Description**

An unstable wormhole, deep in space. Wormholes of this kind usually collapse after a few days, and can lead to anywhere.

This wormhole seems to lead into high security space.

This wormhole is beginning to decay, and probably won't last another day. This wormhole has not yet had its stability significantly disrupted by ships passing through it. Larger ships can pass through this wormhole.

Overview (combat set II)

1.0 Wormholes Roaming (Lorens Ghassan) [1]

WZD-472 HS Larger B274 Coordinate 0 J122931

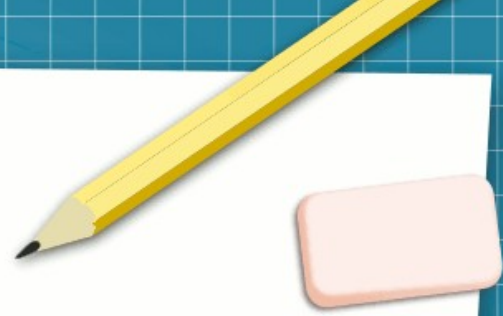

- “WZD-473 HS Larger B274”
- Here the SIG\_ID always comes first.
- 2<sup>nd</sup> is the destination in this case High Security space.
  - Other things you might see are Low Security, Null Security.
  - Then the “Unknowns” which are other wormhole space systems.
  - Here you might see:
    - Unknown (C1/C2 wormhole)
    - Dangerous Unknown (C3/C4 wormhole)
    - Deadly Unknown (C5+ Wormhole)
- After the destination we put the size of the wormhole in this case Larger
- And then the type of the wormhole in this case B274

- Wormholes Roaming, and Wormholes Roaming Not Zero.
- When you have a roaming, that is a non static random wormhole bm, please put them in one or the other.
- The difference between these folders is very important.
- If you bookmark into Wormholes Roaming, the bm MUST be at zero distance from the hole. That way us “rollers”, can get on grid and quickly deal with the hole, especially under combat conditions.
- Wormholes Roaming Not Zero is if you do not have time or in a long set of scans and want to record it from the probe scanner screen but not visit it.
- To get the at zero bm warp to 100km and hit save location.
- The proper format was discussed in the previous slide.

- Here is the final outcome
- Note we have 3 data/relic sites
- Nexus is marked in the Nexus folder
- Ursus is marked in the Ursus folder.
- I also cleaned out the contents of the Ursus folder as they no longer apply.
- Nexus Entrance
- Nexus Exit are still present.
- And We are done

The End
